Essay

Should students have a long summer holiday or should terms be longer? It's a very popular question for adults and teenagers. I am also interested in that question, because I am still a teenager. In that essay, I'll try to answer what's more important - longer summer holiday or longer school terms?

First of all, many teenagers have their favorite subjects which they study better than others. For example, my friend studies law and history but he's very bad at maths. He doesn't like it, so he doesn't study it. If terms become longer, my friend will get even more maths lessons than law and history. But if he gets longer summer holidays, he will study more law and history.

Secondly, teenagers can do more leisure activities on summer holidays. These activities can help them to find good jobs in the future. For example, if someone plays basketball, he will spend more time on it on holidays. I can say the same thing for all leisure activities, not only for basketball.

I have written two reasons why summer holiday is better than longer school terms. However, there is one big minus that can change your mind. Most of teenagers do useless things on summer holidays. They don't teach anything. So, if summer holidays be longer, students will have a risk to forget everything they were studying.

In conclusion, I think that students need longer summer holidays, but parents should control them, or teenagers will become dumb and lazy.

$K1-2-K2-2K3-1-K4-1-K5-1 = 25$
